

TECH DEBT CHECK

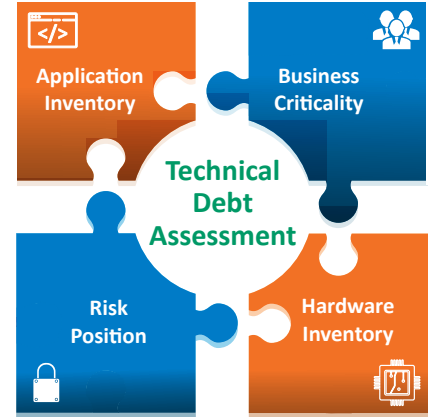

“Tech Debt Check is a user-friendly innovation that will revolutionize how governments decide which applications to update or replace.”

L. Brooks Patterson, Oakland County Executive

Measuring Technical Risk Across Your Technology Portfolio

Tech Debt Check is a vital assessment tool that government agencies can use to take inventory of their applications and hardware, while measuring the technical risk of their overall technology. It provides a clear view of your government agency’s technology footprint that is easy to view, understand and manage.

Tech Debt Check also helps to create an open line of communication and collaboration with application owners; therefore improving the quality of information necessary to ensure that each application is identified, documented and accurate.

Tech Debt Check Will Help Governments Answer:

- What are the applications that support the most critical processes, and which require attention and investment?
- Are there applications that are unused, or rarely used for which recurring fees occur?
- Is it possible to reduce costs by using one application instead of many for the same business purpose?
- Is business continuity at risk if there is an IT failure due to interdependences between applications?

Benefits of Tech Debt Check:

- Creates Technology Collaboration
- Clear View of Technology
- Understand Technology Risks
- Properly Manage Technology
- Minimize Operating Costs
- Minimize Supporting Costs
